PERSONAL PROJECTS

Learning Management System (12/2019 – 01/2020)

- We have developed the E-platform to connect the students and Mentors to monitor and give suggestions and tasks to students through this web portal. Where I work as front end Web developer (React).

Sunshiv Electronics (09/2019 – 12/2019)

- I have developed a full stack application using PHP to show the details about the product which has been developed by a company. This also provides a lot of off-campus recruitments by various companies, which will be updated on a daily basis by this company.

Zhakra20 (03/2020)

- I have developed a simple web page for an event that has been conducted by an automobile department in Kongu engineering college . It consists of a huge number of events, both technical and non-technical. It is just a front end web page which will have details about all of the events conducted by them.

Remember It (06/2020)

- This is a PWA based website, a place where you can store all your links offline and also make them your favorites. It is completely adaptable and gives you the flexibility to edit, add or delete content.
